

Power BI Assignment 9

✦ Assignment Goal

To create **One-to-Many (1:M)** relationships between:

1. **Students[StudentID] → Enrollments[StudentID]**
2. **Courses[CourseID] → Enrollments[CourseID]**

📄 Steps to Create Relationships (for Power BI or Power Pivot)

Step 1 – Import the Dataset

1. Open **Power BI Desktop** (or Excel → Power Pivot tab → Manage).
2. Click on **Home → Get Data → Excel (or CSV)**.
3. Import the three tables:
 - Students
 - Courses
 - Enrollments
4. Check that each table is loaded properly under the **Data View**.

Step 2 – Open Model (Relationship) View

1. Click on the **Model icon** (🔗) on the left pane in Power BI Desktop.
2. You will see all tables represented as boxes.

Step 3 – Create Relationship (1:M)

1. **Drag** StudentID from the **Students** table onto StudentID in the **Enrollments** table.
 - Relationship Type: **One-to-Many (1:M)**

- Cardinality: 1 (Students) to * (Enrollments)
 - Cross Filter Direction: **Single**
 - Click **OK**.
-

Step 4 – Create Second Relationship

1. **Drag** CourseID from the **Courses** table onto CourseID in the **Enrollments** table.
 - Relationship Type: **One-to-Many (1:M)**
 - Cardinality: 1 (Courses) to * (Enrollments)
 - Cross Filter Direction: **Single**
 - Click **OK**.
-

Step 5 – Verify Relationships

Your **final model** should look like this:

Students (1) —< (M) Enrollments (M) >— (1) Courses
