

How to Access a Power BI Report in PowerPoint

Microsoft Power BI allows you to **embed or access live, interactive reports directly in PowerPoint** presentations. This feature helps you **present real-time insights** without taking screenshots or exporting static visuals.

Step-by-Step Process

Step 1: Open the Report in Power BI Service

1. Go to the **Power BI Service** → <https://app.powerbi.com>
 2. Navigate to the **workspace** where your report is published.
 3. Open the **report** you want to embed in PowerPoint.
-

Step 2: Use the "Export to PowerPoint" or "Open in PowerPoint" Option

There are **two main ways** to bring your report into PowerPoint:

Option 1: Embed Live Power BI Report in PowerPoint

1. In Power BI Service, open the desired report.
2. Click on **File** → **Export** → **PowerPoint** → **Embed live data**.
(Or look for the "Open in PowerPoint" option on the top toolbar.)
3. Power BI will generate a **PowerPoint (.pptx)** file containing a live report link.
4. Open the file in **Microsoft PowerPoint**.

You'll see an **interactive Power BI visual** directly inside the slide — not just a static image.

Step 3: Sign In and Interact

- When prompted, **sign in with your Power BI account**.
 - You can **interact with visuals** — filter, slice, or navigate between report pages directly within PowerPoint.
 - The data shown will always be **up-to-date** based on your Power BI Service dataset.
-

Option 2: Insert Power BI Report Manually Using PowerPoint Add-In

If you want to insert a report into an existing PowerPoint slide:

1. Open **PowerPoint**.
2. Go to **Insert** → **Add-ins** → **Get Add-ins**.
3. Search for **Power BI** and add the **Power BI add-in**.
4. Once added, a **Power BI panel** will appear on your slide.
5. Click "**Sign in**" → then "**Link your report**".
6. Paste the **report link** (from Power BI Service → Share → Copy link).
7. The interactive report will now appear inside your presentation.

Requirements

- You must have a **Power BI Pro** or **Premium Per User (PPU)** license.
 - The report must be hosted in a **workspace you have access to**.
 - PowerPoint must be **version 2302 or later** (Microsoft 365).
-

Benefits

- **Live & interactive** data — no need to update screenshots.
 - **Professional presentations** with real-time insights.
 - Easy to **switch pages, filter visuals**, and present dynamic data to stakeholders.
-

In summary:

You can access Power BI reports in PowerPoint either by using the **“Open in PowerPoint” option from Power BI Service** or by using the **Power BI add-in** within PowerPoint.

Both methods enable **real-time, interactive dashboards** directly inside your presentation.
